

RICHMOND CITY COUNCIL

August 16, 2005

The regular meeting of the Richmond City Council was held at the Community Building on August 16, 2005. The meeting began at 7:00 p.m. Mayor Kip Panter was in the chair. The opening remarks were made by Marlowe Adkins.

The following Council members were in attendance: L.D. Bowcutt, Leslie Erickson, Allen Lundgreen, Terrie Wierenga and Cordell Johnson.

BUSINESS LICENSE APPLICATIONS

MARLOWE: Goo Goo's R Us, owned by Randy and Vicki Blaylock, have applied for a business license to operate a ceramic shop in the building of the former Jonas Ceramic Shop.

VICKI: We won't have any employees. Just me and my husband.

Approved by Council

MARLOWE: The Handy Man Can, Christopher Hughes owner, applied for a home based business license to do miscellaneous repairs around homes. This will be an "at home office" function as all work will be done elsewhere.

Approved by Council

LIBRARY BOARD REPORT

TERRIE: Lora Smith has been appointed Chairman and Kathy Davis will be Second Chair if approved by the Council. Sherry Anderson has recently moved from the area and I would suggest along with the other members of the Board that Lori Koch be appointed in her place. Lori has volunteered extensively in the past and is aware of the Library programs and what is trying to be accomplished. I would suggest we appoint her to the Board as well.

Choices were endorsed by Council

MINI-MOTORCYCLE DISCUSSION

TERRIE: In the last meeting we discussed a possible ordinance for mini-motorcycles. I have found that the State of Utah currently has an ordinance that makes it only legal for these motorcycles to be ridden on private property. The ordinance is punishable as a Class C Misdemeanor. This ordinance does not apply to ATV's. I would suggest that we start enforcing this ordinance.

FIRE DEPARTMENT REPORT

STONEY TANNER: We recently received a grant. We are doing everything we can to try and secure a part of the Homeland Security Grant. In the last 6 months, 4 new firefighters have joined us and we are currently trying to get more EMT's to sign up.

MAYOR: Recently the City well had to be turned on for two days. We were running well below the allowed rate of 686 gallons per minute from the springs. For the last few days we have been in the 500 gpm area according to Rob and Marlowe.

MARLOWE: Although the test results are not yet back from ChemTech-Ford, when Rob reported that the Main Street tank was down to four feet, I declared a "fire emergency" and turned on the well. Robert has checked for leaks and has checked all of the equipment and cannot find a problem.

MAYOR: Currently there are not any problems. It may have been due to a faulty valve.

MARLOWE: Robert is currently checking on this twice a day.

MAYOR: The chlorination upgrade has been approved for the wastewater treatment. Brad Rasmussen, from Aqua Engineering, ordered the equipment today. Richmond City is responsible for the cost of this project. I have recently found out that about 3 ½ acres of land where a new sewer cell could be located is considered wetlands and would need to be mitigated.

The trade is 1 ½ acres to 1 acre. Estimated cost to mitigate the wetlands is \$350,000.

MARLOWE: Ironically, we have created those wetlands from our sewer discharge but once created, we do not have the power to "un-create."

MAYOR: We need to discuss with Zan Harris about a 20 year discharge commitment onto his agricultural land. All options need to be investigated before any commitment is made with Zan. Our new sewer system upgrade is based on a 20 year plan and a 20 year agreement will need to be reached with Zan. We would not need a discharge agreement if we choose the Membrane System option for the sewer system upgrade. The discharge could be put back in the Richmond City Irrigation System for usage.

MARLOWE: Currently we are not adding chlorine to our water system. My concern about adding chlorine is that the de-chlorination chemical (required by EPA) causes the pH level to increase. Right now we are at 8.6 and cannot exceed a limit of 9.0. When the chlorine treatment comes on line, acid may need to be added to drive the pH level down to the permit level.

MAYOR: A temporary aeration plan has been approved with the chlorination plan discussed above for the sewer system. Once electricity is located at the ponds we can use the temporary aerators from Brad and Tremonton in the cells where we think they might do the most good.

MARLOWE: The cost of the electrical poles is approximately \$22,000.00. There will also be a charge of just over \$10,000 for each transformer and ground link that we use within the system.

MAYOR: I have prepared a letter to Zan Harris with a memorandum of understanding that I would like put in the minutes.

*****TEXT OF CHARLES ZAN HARRIS LETTER*****

August 16, 2005

Mr. C. Zan Harris
496 W. Main
Richmond, UT 84333

Dear Zan,

Because of your interest in using the treated wastewater from our sewer facility to apply on your adjacent farmland, I've asked our engineer to develop some appropriate treatment facilities. Brad Rasmussen, of Aqua Engineering, has done so and these are being presented to the citizens of Richmond for their input.

Brad noted that for financing purposes, it would be very desirable to have, in writing, an agreement between you and Richmond City that this use of the treated wastewater will be guaranteed for at least twenty years. Following our recent discussion, I've had prepared the attached Memorandum of Understanding.

If you agree with the Memorandum of Understanding, please sign it in front of a witness and return it to me. You'll note that this is merely a "stop-gap" measure until a formal contract can be prepared by the City Attorney for signature of all parties involved.

Sincerely yours,

Kip E. Panter
Mayor

**MEMORANDUM OF UNDERSTANDING
BETWEEN
CHARLES ZAN HARRIS
AND
RICHMOND CITY, UTAH**

I, Charles Zan Harris, currently residing at 496 West Main in the City of Richmond, County of Cache, and State of Utah, do hereby undertake the following provisions of this Memorandum of Understanding:

1. I desire to use the treated wastewater, under the appropriate provisions of the State of Utah, Division of Water Quality Wastewater Rules, R317 series, for land application on farmland legally owned and operated by myself adjacent to the Richmond City sewer lagoons.
2. I agree that no direct human consumption crop will be watered or otherwise irrigated using the above treated wastewater.

3. I do enter into an agreement that I will utilize this water for a minimum of twenty (20) years beginning during the calendar year of 2006, Current Era.

4. I do agree that the formal legal agreement and contract to be developed from this Memorandum of Understanding will obligate myself, family members, heirs, assignees, and/or buyers of this land to this twenty year usage agreement.

5. I do understand and agree that this Memorandum of Agreement will be considered legal and binding until a mutually agreeable formal legal agreement and contract can be developed through the office of the City Attorney for Richmond City in conjunction with any legal counsel that I may desire to engage at my own cost.

Charles Zan Harris

Kip E. Panter, Mayor

Signed this __ day of August, 2005

Signed this __ day of August, 2005

FIRST RESPONSE SERVICES

MARLOWE: I have a contract for the Interlocal EMS service for the City which originated with Cache County. It needs to be reviewed and approved tonight.

CORDELL: Is this a one year agreement?

MARLOWE: Yes.

TERRIE: This agreement binds us to make sure we have certain training. We have been aware of this and have completed the necessary training for this already. I recommend we accept this agreement.

A motion was made by Terrie to accept the Interlocal EMS Agreement, seconded by Cordell, and the vote was unanimous.

AT THIS POINT THE COUNCIL CLOSED THE REGULAR MEETING AND OPENED THE ADVERTISED PUBLIC HEARING RELATIVE TO OPTIONS FOR NEW WASTEWATER FACILITIES

Brad Rasmussen from Aqua Engineering attended to explain the options that are available that would allow Richmond City to be in compliance with State of Utah Regulations. Tim Beavers from the State of Utah Water Quality Office was in attendance as well.

BRAD: Richmond City’s Sewer Treatment Facility was originally constructed as a containment facility. Later, it was changed to a discharge facility, which enabled the discharge to go into the

Cub River. There has been a study performed on the Cub River drainage and it has been determined that too much phosphorous is getting into the river. The discharge from the current system into the Cub River is at a Level 4 and the requirement by the State is a level of .25 or less. Currently, there are only 2 cities in the State of Utah that do not violate this regulation. This is a problem that all other cities including Richmond must eventually resolve. I will present six options that can help to correct this problem.

OPTION 1 ASPIRATING AERATION OF EXISTING CELLS

BRAD: The first option is called an Aspirating Aeration System. It would require the addition of one new cell. This cell would be used to store the treated water over the winter and it could be discharged onto an agricultural field in the spring time. Aerators would be required to put oxygen into the cells. This is the cheapest of the options. It will, however; have a high monthly energy cost to keep the aerators running due to the six foot depth of the ponds. Normally aeration ponds are eight feet deep. This system has a thirty- day storage time. One problem that will still exist is algae. The probable cost of this option is \$2,613,534.00.

OPTION 2 ASPIRATING AERATION WITH NEW CELLS

BRAD: There is also an Aspirating Aeration System. This option would require the construction of two new, smaller cells to the east of the existing cells. Once again the winter storage would be pumped onto agricultural land in the spring. This option would require less monthly energy costs than Option 1. There would be a high cost of excavation to create the ponds with this option. The probable cost of this option is \$3,199,095.00.

OPTION 3 EDI ATLAS IS

BRAD: This system would require dredging of the cells. This can be very expensive. This system is extremely simple to operate and is based on a grinding system where the material is ground up into small particles and dispersed into the cells. It uses a screen grinding system that will also remove the big solids from the cells. They are gathered by a screen and an employee would need to clean the screen on a regular basis. This grinding system would be in the new headwork's building. Each of these options I am presenting requires a new headwork's building.

TIM BEAVERS: This system does not remove 100% of the solids. A few will still make it through out into the cells.

BRAD: Dredging can be done later.

MAYOR: The ponds were installed in 1972. Cell #1 was dredged for the first time about 5 years ago.

TERRIE: Do the screens have to be replaced on a regular basis?

BRAD: They need to be cleaned regularly but the debris can be emptied into a garbage can. The probable cost for this option is \$3,162,477.00.

OPTION 4 STM AEROTOR / IRRIGATION

BRAD: This system is harder to operate than the other options. There is more of a work load for the employee in charge.

TIM: This system requires a better trained operator than the City currently has. It requires Level 3 or 4 certification and currently your people are certified at Level 1.

MAYOR: We need to take into account on each option the cost of construction plus the future costs, including maintenance, utilities and operation.

TIM: Power costs will be a much bigger factor than the wage of the operator of this system.

BRAD: This system has an eight to twelve hour turn around time rather than a thirty day time period like the other options. The discharge could be used for irrigation purposes. The probable cost of this option is \$4,203,432.00.

OPTION 5 STM AEROTOR / DISCHARGE

BRAD: This option is the same as Option 4 but rather than irrigate we would discharge the effluent into the Cub River. All structures are made of concrete. Steel structures require maintenance and concrete is pretty much maintenance free. The probable cost of this option is \$3,582,811.00.

OPTION 6 MEMBRANE SYSTEM

BRAD: Hyrum City just installed this system. This system has the most expensive capital cost but is cheaper to maintain and the chemicals that are required cost less than the other options. This is the newest technology available. It is a very simple system to operate. Oakley City also has this system and their operator is so confident of its' operation that he will actually drink the water as it comes out of the process. Also, the membrane system is odor free.

CORDELL: Does cold weather affect this or any of the other systems?

BRAD: The ponds would freeze over in the first couple of options. Nothing to circulate the water so it would freeze.

TIM: The State of Utah will not step in and offer any assistance until your monthly sewer charge is about 1.4% of your M.A.G.I (Medium Adjusted Gross Income) or approximately \$40 to \$60 per month for Richmond.

MARLOWE: The membrane system will produce clean water which would take us away from constantly wondering what new unfunded restrictions EPA will put on effluent discharge.

TERRIE: What is the life of a membrane?

BRAD: In theory, there is a ten-year rule. But there are unknowns that will factor into the longevity of the membrane. At the next meeting we can discuss options and cost on this.

TIM: The City needs to secure financing for this project before it has the second required public hearing. You need to give the citizens an actual cost of what you are doing.

BRAD: We need to decide between winter storage or discharge. The probable cost of this option is \$4,120,856.00.

TIM: To achieve financing you will need to make a proposal at a meeting in October. Then attend a second meeting in November to discuss your proposal. Then post a 30 day notice of the second public meeting for the citizens which should occur in December. This project should be able to be taken to bid by springtime.

MAYOR: What about the high levels we are currently producing in the interim and the NOV's?

TIM: NOV's (Notice of Violation) will be sent. There is no way around this happening.

MAYOR: If this project is going to take two years or so, I don't see any reason to make a rushed decision on which option we choose. Let's use the temporary fix that is already in process and make informed decisions about our future. If there is new technology coming on line, perhaps we may want to consider taking a little more time.

BRAD: If you are complying with State and Federal Regulations they will pretty much leave you alone. They don't watch you unless you are breaking the law.

MARLOWE: This will be our second N.O.V., and it has 38 violations. A settlement agreement will need to be reached.

BRAD: We need to make sure we put a Compliance Agreement in the Settlement Agreement. I would suggest implementing some type of penalty if you don't meet your time-line. This will help to keep the EPA. and third parties away from trying to take control or force unnecessary litigation.

CORDELL: We need to keep this project going. A new Council will be taking over in January and I don't want to lose the momentum that has been built on this project.

BRAD: I am anticipating about \$300,000.00 to mitigate the wetlands for the new cell. Remember there will be winter storage that will need to be used in the spring depending on which option we choose. Make sure a written, enforceable agreement is reached with the landowner before any options are chosen. Also, the irrigating will need to be done by sprinkler, not flood irrigating.

DAN MILLER: Won't the water discharge go into the ground and get back into the river?

TIM: There is a risk of that, but it is minimal.

BRAD: I know there has been talk of a possible land acquisition to the west of our current property by the lagoon. This could be used for additional storage or possible irrigation.

TIM: There are two types of water discharged from sewer treatment systems. One is water that is clean and can be consumed by humans. This water has intense regulations that must be met. The second type of water is non-consumable but is used for irrigation and has fewer regulatory problems.

MAYOR: Zan Harris will be able to drain the ponds in about five or six days of irrigating. The majority of his watering will not be from the pond. He will still need to apply fertilizer even with the phosphorous and nitrogen that would be discharged with the water from our system. Therefore, the danger of adding more nutrients to the Cub river system because of the use of our discharge water would be pretty minimal. I suspect we would need to do some kind of analysis to determine what nutrient load was being applied. Whatever system we decide upon, we need to make sure we have as many citizens as possible involved in this decision. In the end we all pay the bill for this project.

BRAD: The membrane system requires no storage ponds. The water would usable in the Richmond City irrigation system immediately or discharged into the Cub River.

ALAN LOWER: The probable costs you are using are not real! They are way too high. I could get much of this done for half as much.

BRAD: Oakley spent 1.7 million to install their membrane system.

ALAN: Get used equipment for this project. Geneva Steel is throwing it away. All you need to do is relocate it to here.

BRAD: The right equipment needs to be purchased, not equipment that is used or free. If it is the right equipment then it is okay but very seldom is used stuff what is required. The costs I have presented are worst case. This project could be much cheaper. It would be really hard to go back and try and get a bigger loan if we are too low on the probable cost. We have to error on the side of caution which means higher not lower.

TIM: The State of Utah will only support the most cost effective alternative.

TUCKER THATCHER: Do these options take into account the growth the City will incur in the next few years?

BRAD: All of the options presented are based on a 500,000 gallon capacity and currently the City is at 250,000. I have included population growth in my calculations.

PUBLIC HEARING WAS CONCLUDED AT THIS POINT AND THE REGULAR MEETING RESUMED.

HIGHWAY ENHANCEMENT PROJECT UPDATE

Chris Sands from Bio-West attended the meeting to give an update on the Highway Enhancement Project.

CHRIS: There is a meeting with UDOT next Tuesday to give input and get updates on the project. All of the Council can attend or you can give me your input tonight and I will pass it on at the meeting. As per the last meeting, I have taken Cordell's suggestion of locating the trees between the light poles and implemented it on the current drawings. I have also removed the trees in the section that has been paved over in front of Cache Trailer on the corner of 200 South and the highway. If you want this changed to include trees, I need to know by the Tuesday meeting. There is an extremely narrow section of park strip in front of Cache Valley Counter Tops. Originally, the plans included trees in this area but it is too narrow. I would suggest stamped concrete in this area if possible.

CORDELL: I would like to try and keep the same number of trees even if we move those to another location.

CHRIS: I need a decision by Tuesday of what changes you want to see done. I have estimated the cost of this project at \$100,750.00. The budget for this project is approximately \$70,000.00. There is a chance that the entire budget for the project that includes White Pine and Smithfield Gateway could be jumped from \$250,000.00 to \$300,000.00. If this happens, Richmond City would get some additional funds on top of the \$70,000.00 budgeted.

MAYOR: Let's get all the questions answered tonight.

CORDELL: Let's move the trees currently located on the east side of the road in front of Cache Valley Counter Tops to the west side of the road on the same street.

****Vote was unanimous to move trees between Main Street and 100 North from the east side of the road to the west side of the road.****

MAYOR: Let's remove the maple tree in question that is currently just south of the old Randy's Texaco building.

TERRIE: Can the tree be dug up and relocated.

L.D.: No, it is too big and old.

****Vote was unanimous to remove maple tree from south of old Randy Texaco building.****

MAYOR: I would like to see three trees located in front of Cache Trailer on 200 South, if possible.

CHRIS: Keep in mind this will be on private property and you will need to work out details with the landowner.

MAYOR: I will contact the landowner.

DEPUTY REPORT

BRANDON: I have contacted S.W.A.T., Search and Rescue and the Logan City K-9 Unit about attending the City Party. I have only four more days on patrol duty and then Deputy Eggleston will be taking over full time.

DAN MILLER: At 2:55 A.M., there is a vehicle that speeds down Main Street from about 400 East Main and runs through the stop sign and is a reckless driver. Please monitor this situation.

MAYOR: Also, can you please enforce the new State of Utah Mini Bike Ordinance.

BRANDON: I will pass this information onto Deputy Eggleston and ask him to follow through on it.

COUNCIL MEMBER REPORTS

CORDELL: I recently attended a CDBG meeting in Bear Lake. There will need to be a public hearing in September to discuss this. We will need to determine what projects we want to apply for in the coming year. It could be for the Sewer System or for a possible Fire House Expansion.

MAYOR: We need to upgrade the Capital Improvement Plan for the next 5 years. Let's discuss this with Brad Rasmussen tonight and put the sewer project on the plan.

LESLIE: Does everyone know their City party assignments?

L.D.: There were around 400 people in attendance last year. We will need extra roast beef, rolls, corn and beans. This is due to the fact that we ran out at last year's party and we are planning on having more people attend this year. Also, I have contacted Crimson Rose and they will be attending and supplying the entertainment.

MAYOR: We need to make sure to invite the crew from Staker-Parson's as well as UDOT. On another note, the parks look really good right now. Thank you to those that have made this happen. Two new trees have been installed as well as part of an Eagle Scout project. In addition the park strips were cleaned up near North Cache.

LESLIE: The Richmond City Youth Council Leadership Retreat will be on August 26 and 27 at Downetta Hot Springs. There will be about fourteen youth attending. There is a small cost of \$3.50 per person and we are paying that for some of the kids to attend.

ALLEN: The Neighborhood Watch program should start to move forward.

TERRIE: There was a CERT group meeting last week. We made kits from items donated by Utah State University. We have also received the helmets and vests that were recently ordered. The next meeting will be in October.

ALLEN: There was great attendance at the meeting. Nine of the eleven that attended the previous class attended this one. This is moving forward in a positive direction.

CITY MANAGER REPORT

MARLOWE: Monica Merrill has expressed a couple of concerns to me. I have asked her to come before the Council and explain her situation to you.

MONICA: I pride myself on being a Richmond City resident. Right now I have two major concerns by my residence. There needs to be a plan for problem citizens. I have a young man that lives across the road from me with his grandparents. He is selling drugs. He has been in jail several times and he keeps coming back to live here. I have called the cops several times and they have not been able to catch him yet. I am concerned that someone is going to get hurt by this young man. I don't know what to do but something needs to be done. We need to guard our youth from people like him. Also, recently a Richmond City employee (Gerald Bell) approached Mrs. Miller, a friend of mine, and informed her that she would be fined \$1,000.00 for putting her grass clippings in the street. He does not have the right to act this way. Mrs. Miller recently suffered a stroke, and her health is delicate. This employee did not have the right to do this and should be consulted with.

MAYOR: All you can do is call the police with the situation across the street. Obviously his civil rights cannot be violated and unfortunately it takes an incident before action can be taken. I am aware of the situation. The police are aware and I believe monitor the situation the best they can. As for the situation with Mrs. Miller, Gerb probably shouldn't have made the comment, but on the other hand when they mow barrow pits it is frustrating for them to continually run into obstacles placed there by citizens. I have talked to the employees about these kind of comments before and will do so again.

MONICA: Is the Neighborhood Watch Program in effect yet?

ALLEN: We are currently trying to get this program moving again.

MARLOWE: There have been fourteen applications for the maintenance position. Chris and I will be doing a rough interview with eight of the applicants tomorrow and the remaining six at a later time.

MAYOR: I would like to present three to five of these applicants before the Council. The Council is certainly welcome to sit in on any of the interviews at any time.

MARLOWE: Applicants have applied from Logan to Franklin. Some of them will be disqualified due to the 15 minute response time requirement. I am meeting with JUB Engineering tomorrow morning about the proposed changes to the Construction Standards Ordinance I am presenting to you at this time. If you see or know of any additional changes please let me know before our meeting on Wednesday. My goal is to put the Subdivision Standards and Construction Standards together.

TERRIE: What is the timetable?

MARLOWE: In time for the Spring 2006 construction season. I know this is taking a long time but I want it to be correct for the \$8,000.00 we are investing in it. Once they are completed, I plan on having a meeting with the contractors in February or March to explain the changes.

MARLOWE: I have been informed that the Cingular Wireless cell phone tower will not be able to be located behind the Relic Hall. The tower cannot be within ½ mile of the “Historic area” due to Federal Regulations. Cingular is investigating to see if there is anything that can be done about this.

LESLIE: I want to review the information you have received on this matter.

TERRIE: I would like a copy as well.

MARLOWE: I will e-mail you a copy of everything I received earlier today.

MAYOR: We will take a look at the issue and make some contacts before any decisions become final.

MARLOWE: Eric Larsen has asked for the City to reimburse a portion of his water line repair. Gavin blue staked the area and was wrong on his location. This error caused Eric to incur extra machine time that was unnecessary. He is just asking for whatever assistance the City will offer.

CORDELL: \$200.00 is fair. Please get him reimbursed.

MARLOWE: Bob Hugo and another individual are going to be building homes by Clyde Hendricks on north State Street. They would like to change where they access the City water line for the eight inch extension that they will need to install.. They would like to tie on from the Rocky Point and 100 East line instead of coming up State Street from 300 North..

MAYOR: Let’s review this. Also, we need to speak with Dave Henson and see if he has an interest in hooking up to the line as well since he is currently on a well.

MARLOWE: I have been informed by Qwest that a refund of \$3,370.63 is due to them. They have overcharged their customers in the past and therefore overpaid the City in franchise tax. They want a refund of one lump sum payment, or a monthly deduction from our franchise tax payment of \$280.89 until it is paid in 12 months.

MAYOR: Pay the full amount in one payment and send them a letter with the payment about our concern over the letter of demand they have sent to the City about this money.

JUSTIN: We are currently preparing for the audit that will occur at the end of September. These financials are for July 2005. The only point of note is the high amount paid in insurance for the month. This is due to the fact that we pay the City’s yearly premium in July so it is paid

for the fiscal year to come, and each month the budgeted amount will start to get closer to the amount spent.

BOYD LEWIS: Please note that we have received the RAPZ Tax Money for about \$3,200. In talking with Lynn Lemon he told me that a portion of the money was distributed to all cities based on population. It is not much but they hope that it will help do some projects.

MAYOR: We were granted about \$37,000.00 for the sports complex in our last RAPZ tax application. Where do you want the \$3200.00 to be used?

MARLOWE: There will be a primary election on October 4th to narrow the seven people running for City Council down to four to fill the two vacancies. Only one person is running for the position of Mayor.

A motion to pay the following bills was made by Cordell, seconded by Leslie, and the vote was unanimous.
